Innopolis University Student Union Portal

Problem

Meet Thomas.

A freshman at Innopolis University. He just arrived and wants to get involved in university life - but has no idea where to start.

That's the moment we knew something had to change.

Here is solution.

SU:Portal

Thomas opens one link and immediately sees:

- What is Student Union
- What each department does
- What events are coming up
- How to share his feedback
- And how to enroll to SU

Product requirements (MoSCoW principle)

01 Must

- View upcoming events
- View SU member directory
- View SU departments and their info
- Publish and manage events and news
- Fill out an active questionnaire
- Create and manage questionnaires

02 Should

- View past event photo gallery
- Donate to SU
- Manage internal tasks on a kanban board
- View and export questionnaire results

03 Could

- Submit feedback to SU
- Collect survey responses anonymously
- Sync Telegram channel posts to the website

04 Won't

- Room autobooking / Outlook integration

Quality requirements

Performance Efficiency

Every page on the portal loads in under 2 seconds, so students never wait to find the information they need.

Confidentiality

The admin panel is completely invisible to regular users. Students see a clean public site – no login buttons, no admin controls, nothing that wasn't meant for them.

Usability

A first-time student can find any SU department and its members within 30 seconds of opening the site - no instructions needed.

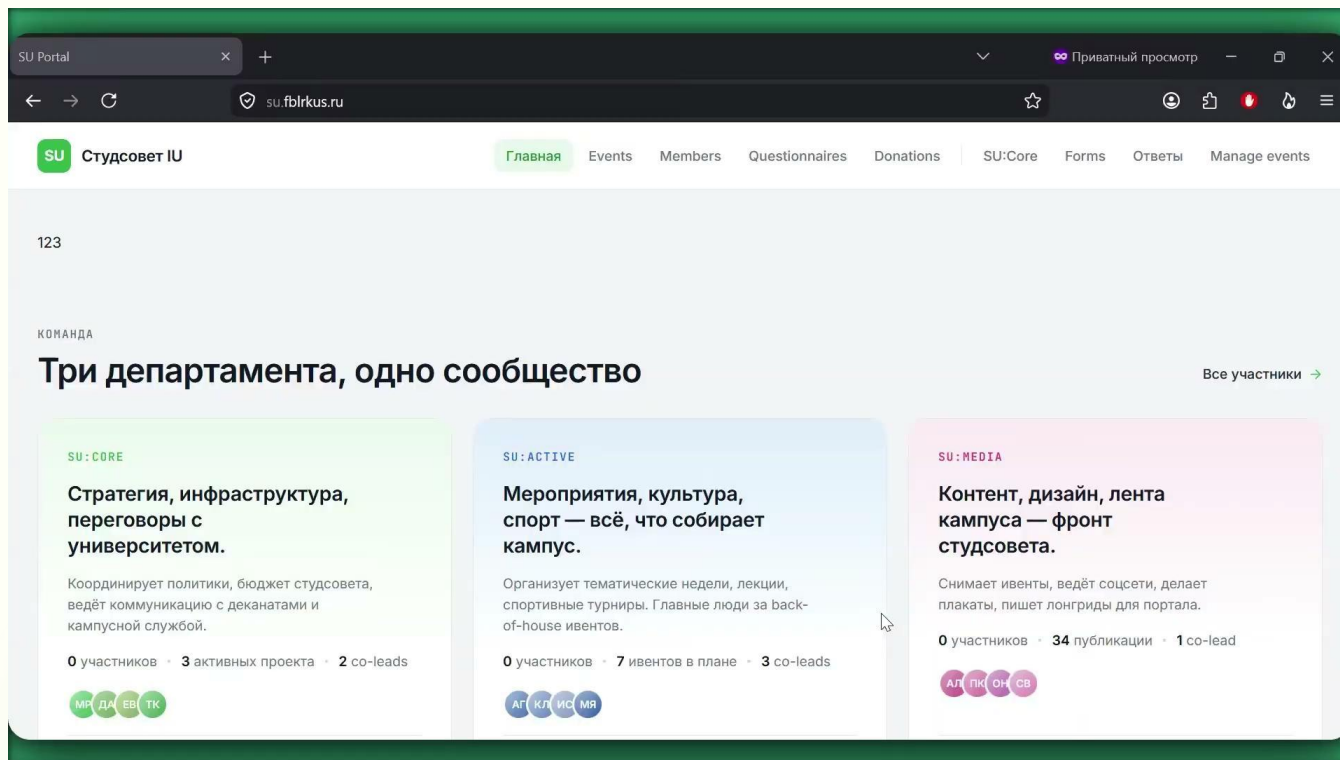

Roadmap

Timeframe	Sprint 1	Sprint 2	Sprint 3	Sprint 4	Sprint 5, 6,...
Milestone	MVP v0		MVP v1	MVP v2	Working product
Goals & Challenges	Discuss features, etc.		Work on the admin panel		Connect backend to frontend
Features		Acceptable design	Admin panel	Adding events, members, etc.	

Client collaboration

- Donate page: QR code should be enlarged and centred
- Replace delete button with edit on Members page
- Anya and Valera have slightly different UI preferences (e.g. top buttons) - finding middle ground
- Last 4 events should be shown in the updates section
- Real site content (member profiles, events, SU history) still pending from customer side
